TABLE OF CONTENTS

WELCOME

Thank you for choosing a cellular phone from Maxon Telecom, Korea's second-largest IT company and a manufacturer with more than two decades of experience in the electronic communication industry.

Your new communication device represents the cutting edge technology of the 21st century, featuring 64k brilliant color display, enhanced messaging service (EMS), polyphonic ring tones and stunning games along with extensive Organizer and Phonebook properties.

Uplink to the Mobile Internet facilitated with WAP 1.2.1 and GPRS data connection.

The phone size has always been a Maxon focus point, and the MX-C90-series have very modest exterior dimensions and will fit into any shirt pocket or purse.

40 different ring signals, SMS alert signals, and wallpapers along with renamed profiles and caller groups facilitates a high degree of personalization.

You have acquired a phone and a communications companion that will enable you to stay tuned wherever you go.

ABOUT THIS USER GUIDE

This user guide is written only for the MX-C90-series cellular handsets.
The contents of the user guide follow the same order as the phone menu system goes.
Please note that some optional functions may not be shared by all models.

Inquiries regarding the user guide or phone handling can be addressed to:

Maxon Technical Marketing
maxontelecom@maxontelecom.com

	# Key – Special character key. Turns T9 text dictionary on or off.
	Side key – Volume and Keypad level control key.
	Side cam key – To move directly to camera menu.(Refer to p.91)

USE OF SIM CARD

SIM card is always needed to use the phone. **"Please insert SIM card"** appears when the SIM card is not installed since it contains information about phone and network. Messages and phone numbers stored in the phone can be transferred to other GSM terminal if both SIM cards are the same size.

Please take note that you don't lose SIM card and that you don't keep it near magnetic and electronic devices to prevent loss of information and hitch in networking.

When you take SIM card and battery apart, you should always turn off the phone. The insertion of SIM card while charger is in use can be a contributing factor to the damage of SIM card.

NAVIGATION KEY

The navigation key is used to search through the menu.

UP

To scroll up and access the look up directly from the idle mode.

DOWN

To scroll down and access the dial list from the idle mode.

LEFT

To access the phonebook directly from idle mode.

RIGHT

To access the messages menu directly from idle mode.
USING THE BATTERY

INSTALLING THE BATTERY

❶ Insert the bottom of battery into the groove at the bottom of the handset.
Then ❷ push down the battery until it locks into place.

REMOVING THE BATTERY

Pull down the tab ❶ with one hand and lift the top of the battery
❷ to separate from handset.

*The battery must be securely placed in the battery com-
partment. If battery is improperly inserted, the handset
will not turn on or the battery may slip off during use.*

14

CHARGING THE BATTERY

POWER CONNECTION

Insert the contactor of charger into slot and plug the charger into the outlet.
* Please note that the contactor should be placed into slot, a certain side up.
CHARGING STATUS

When its battery is charged in power off mode,
the phone shows an animation in LCD.

Information

Charger
connected

On
*Be sure to charge the battery for at least four hours prior to the
first time use. For extended battery life time, charge the battery
fully for a long time rather than frequently for a short time period.*

15

CHARGING THE BATTERY

REMOVING THE CHARGER
Press down the release latch and pull out the contactor of charger.

Don't remove the charger by pulling its cable.

IMPORTANT BATTERY INFORMATION

● Don't keep a battery near a fire and attempt to disassemble it.
  Use only the battery approved by manufacturer.

● Never touch battery contactors with any metallic object, which lead to battery short circuiting especially when carrying a battery in a pocket.
  - Possible to cause burns due to blasting and hot temperature.

● Don't drop a battery and apply any physical shock to the battery.
  - Malfunction and fire are feasible.

● Please keep a battery out of children's reach and in a dry and cool area.

● Charge a battery and keep it in a room temperature.
  - Extreme temperature prevents full charging and affects battery capacity in a negative way.

● Since a battery is an expendable product, the battery operating time decreases through frequently repeated charge and discharge.
  - A new battery to be purchased when the operating time is reduced halfway.

● Keep the contactors of battery clean and dry.

● Plug out a charger in order to protect the phone when a lightning strikes.

CHAPTER 2

Basic operation

•Package contents

•Turning The Phone On and Off
(With SIM Card Installed.)

•Installing SIM Card

•Basic Functions

•Entering Letters and Numbers

TURNING THE PHONE ON AND OFF

MISCELLANEOUS

CELLULAR PHONE IN BRIEF

Your cellular phone is essentially a highly sophisticated radio, basically no different from any other two-way radio system.
The ingenuity of the cellular system lies in the splitting of the broadcasting environment into a multitude of relatively small cells with low-power transmitters.

This "Cellular approach" to radio communication allows for extensive frequency reuse so that millions of people can use their mobile phones simultaneously although the number of frequencies are limited. The broadcasting cells are commonly illustrated as hexagons, typically 10 square miles in area with the base station in the center. This arrangement allows for non-adjacent cells to use the same frequencies without risk of interference.

Your cellular phone is in constant contact with the nearest base station. As you move from cell to cell, e.g. while driving in your car, the base station you are approaching takes over when you are within reach.
This happens within split seconds without your noticing it.
All you experience is a stable and clear connection.

However, not all network operators provide the same coverage in all areas. Hence, if you travel near the limit of your network's coverage, you may experience difficulties in maintaining the connection.
The same may hap pen if the radio signal is blocked by obstacles such as high trees, hills or buildings, or if you are inside a heavily reinforced concrete building.

MISCELLANEOUS

ABBREVIATIONS AND ACRONYMS

To remedy the situation move closer to the nearest mast if possible or seek higher ground. If you are inside a building, try moving towards a window.
What is roaming? Roaming is the technique that allows subscribers to move from one cell to another or from one network to another without affecting the call.

What is digital? Early cellular phones relied on analogue systems.
Analogue radio systems transmit the voice signal in its original form, whereas digital technology transforms the microphone signal into number sequences (digits) and transmit these.
When received, the digital signal is decoded so that you can hear the sender's voice.
Digital signals do not degrade in quality as long as the data is received, and they can be compressed to take up less memory.

What is Dual Band? A dual band cell phone has the capability to automatically switch between frequencies and can thus operate on two or more frequency bands, e.g. 900 Mhz and 1800 Mhz.

What is GSM? Global System for Mobile communications is the most widespread standard for digital communication in Europe, Australia and in large parts of Asia and Africa.
GSM uses frequencies in the 900 and 1800 Mhz bands.

What is APN? APN stands for Access Point Name and is basically an URL address on the Mobile Internet.

What is GPRS? General Packet Radio System is a service protocol built on GSM technology.
GPRS allows several mobile phone users to share the same connection. Charges may thus be based on the amount of transferred data rather than on airtime.

MISCELLANEOUS

What is CSD? A wireless service protocol used for WAP. CSD stands for Circuit Switched Data and will enable continuous connection and payment by the amount of data transferred.

What is SIM? Subscriber Identity Module or SIM is the little gold-plated plastic card that you get from your network operator and which holds the unique data the network needs to identify your phone.

What is PIN and what is PUK? Access to use a cell phone is most often protected by a code known as "PIN" - Personal Identification Number. Your SIM card comes with a default PIN that you can change to any code you prefer. See p. 80 for details. If you forget your code, or by mistake enter a faulty code three times in a row, the SIM card will lock. To unlock, you must enter the Personal Unblocking Key or "PUK" code that came with your SIM card.

What is IMEI? IMEI stands for International Mobile Equipment Identifier and is an identification system that can recognize every mobile phone by a specific number. If a phone is stolen, the IMEI system is capable of blocking it on all network operators that support the system.

What are MCC and MNC? Mobile Country Code is a code that identifies the country in which the subscriber lives. Mobile Network Code identifies the network operator.

What is DTMF? Dual Tone Multi Frequency or DTMF is a paging and remote control protocol that allows you to control certain functions via your phone, e.g. listening to your answering machine.

MISCELLANEOUS

What is Cell Broadcast?
Cell Broadcast is a service from your network provider. With CB, you will be alerted when
entering a "cheap zone" or you can obtain traffic information, weather reports and other important infor-
mation sent to you as text messages. Some providers also offer sports results, news bulletins or even
commercials. If offering CB services, your network will forward a list of services and the relevant chan-
nels to enter.

What is WAP?
Wireless Application Protocol or WAP is a standard that allows you to access parts of the Internet, known
as "Mobile Internet" via your cell phone. Using WAP will open many services to you, i.e. news and weath-
er forecasts, ordering services and goods, accessing databases and more.

What is an URL?
Uniform Resource Locator or URL is an address system used on the Internet. All WAP homepages have
a unique address, allowing browsers to distinguish one from the other. An URL always start with the text
string: http://wap followed by the address.

What is ISP?
ISP stands for Internet Service Provider.

MISCELLANEOUS

QUESTIONS AND ANSWERS

Q:My phone does not switch on when I press the key ?
A:The keypress has been too short or the phone has shut down because the battery power
  level is too low to make calls. Recharge the battery fully.

Q:Stand-by time seems too short ?
A:You have made excessive use of the games or the Organizer or display light has been on
  continously due to unintentional key activation. Apply Keypad lock in left softkey menu.

Q:My phone displays: 'PLEASE INSERT SIM'?
A:You must insert the SIM before you can use the phone. If it is already installed, remove and
  clean the blank area with a dry cloth, then reinsert.

Q:My phone displays: 'INVALID SIM'?
A:The phone is SIM-locked and will not accept the inserted SIM. Insert the correct SIM or
  contact your dealer.

Q:My phone displays: "EMERGENCY CALLS ONLY"?
A:Your SIM card is not properly installed or configured, or you are out of network range.

Q:My phone displays: "NO NETWORK" ?
A:You are outside network range or there is no clear path to the transmitter.
  If you are inside a building, try moving towards a window.

MISCELLANEOUS

Q:Some calls are not processed. What is wrong?
A:A call bar has been set to restrict phone usage. Check call barring and cancel as necessary.

Q:Someone else is receiving my calls. What is wrong?
A:The phone has been set to forward your calls to another number.
  Cancel call forwarding as necessary.

Q:Can I send and receive emails and surf the Mobile Internet on my phone?
A:Yes. Your phone has WAP capability, which means that you can access the Mobile Internet
  from your phone.
  For sending and receiving emails, please contact your network operator.

Q:What is T9?
A:T9 text input is a predictive text editor that allows you to type using just one click per letter,
  thus saving time when writing SMS, text entries, etc.

Q:What type of networks are supported?
A:Check the technical specifications on p. 124.

MISCELLANEOUS

Q:Can I use my phone inside a car?
A:Road safety comes first. Always keep your eyes on the road if you are driving.
  You can install a "Hands free" set (see. p. 8) if you need to drive and talk at the same time.
  Always comply with local legislation.
  If your car is equipped with airbags, check safety precautions with your car dealer.
  See also "Warnings" .

Q:How do I clean my phone if it becomes soiled?
A:See "Cell phone care" on p. 128.

Q:Are cellular phones dangerous to my health?
A:No unambiguous scientific evidence exists at this point of time. We recommend that you keep
  abreast with the advice given by your domestic health authorities. See also "Warnings" .

Q:My phone has been lost or stolen. What do I do?
A:Contact your network operator immediately to close your account and prevent misuse.
  Report your phone stolen to local police.

Q:How do I reset my phone to factory defaults?
A:Enter the Settings menu and scroll to "Reset all".

SAFETY

•Safety Information for Wireless Handheld Phones

•Cell Phone Care

•Driving Safety

•Electronic Devices

•Other Safety Guidelines

•Cautions

•Warning

•FCC RF exposure

SAFETY

Read This Information Before Using Your Handheld Portable Cellular Telephone.

EXPOSURE TO RADIO FREQUENCY SIGNALS
Your wireless handheld portable telephone is a low power radio transmitter and receiver. when it is ON, it receives and also sends out radio frequency (RF) signals.
In August 1996, the Federal Communications Commissions (FCC) adopted RF exposure guidelines with safety levels for handheld wireless phones. Those guidelines are consistent with the safety standards previously set by both U.S. and international standards bodies:

     ANSI C95.1 (1992) *
     NCRP Report 86 (1986) *
     ICNIRP (1996) *

Those standards were based on comprehensive and periodic evaluations of the relevant scientific literature.
For example, over 120 scientists, engineers, and physicians from universities, government health agencies, and industry reviewed the available body of research to develop the ANSI Standard (C951).

SAFETY

The design of your phone complies with the FCC guidelines (and those standards).
∗;
American National Standards Institute;
National Council on Radiation protection and measurements; International Commission on Nonionizing Radiation Protection.

ANTENNA CARE
Use only the supplied or an approved replacement antenna. Unauthorized antennas, modifications, or attachments could damage the phone and may violate FCC regulations.

SAFETY

CELL PHONE CARE

Your phone is a state-of-the-art electronic device that will serve you well for many years provided it gets a minimum of attention and care from you. You should never attempt to open the phone casing.There are no user-serviceable parts inside,and you might damage sensitive electronic circuits and components. Unauthorized disassembly will void the warranty. You should never leave your phone in the window of your car or otherwise expose it to strong sunlight or excessive heat for a prolonged period of time as this may damage it. You should never handle your phone with wet hands or expose it to moisture or liquids of any kind.Continuous changes from a cold to a warm environment may lead to condensation inside the phone,resulting in corrosion and possible damage. If you pack your cell phone in your suitcase during travel,beware not to damage it.Cramming a suitcase may crack the LCD display.Remember to switch off your phone during air travel. Like with all other radio devices,touching the built-in antenna area during telephone conversation may impair the quality and lead to shorter stand-by time due to increased power consumption.

The battery. Your phone is equipped with a high-performance Li-Ion battery. Optional battery types may be available, check with your local retailer. Observe the maintenance guidelines and your battery should give you a long service life.
- At the beginning of the battery's life, fully charge and discharge (let it go flat)three times.
- Avoid repeated short charging.It is preferable to let the battery go flat and then recharge it
  completely.
- Avoid charging in strong heat or extreme cold.Ambient room temperature is preferable.
- Don't keep a battery near a fire and attempt to disassemble it.
- Use only the battery approved by manufacturer
- Never replace battery by an incorrect type.

SAFETY

- Never try to open the battery as it contains substances that might be harmful if swallowed or
  allowed to contact unprotected skin.
- Never short-circuit the battery,as it may overheat and course a fire.Keep away from jewelry and
  other metal objects.
- Never dispose of the battery by burning it.It could explode and release harmful substances into
  the environment.
- Never dispose of the battery with your regular household waste.Take it to a hazardous material
  collection point.

The charger. Use only the charger supplied with the phone.Newer pull charger cord to release it from mains,pull the charge itself.
Cleaning & storing. Your phone should always be handled with care,protected from dirt,dust and damp.To avoid scratches,never place the phone face down.
If cleaning is necessary,switch the phone off and wipe carefully with a a soft,slightly damp (not wet)cloth. Allow the phone to dry completely before switching it on.Never use solvents for cleaning.
If you wont use your phone for some time,fully charge the battery and store the phone in a dry place away from direct sunlight.The phone should be switched off during storage.
Point store member:
-Never disassemble the phone or battery.
-Never expose the phone to heat or strong sunlight.
-Never expose the phone to moisture or liquids of any kind.
-Do not paint the phone or otherwise block keypad,microphone or earpiece function,i.e.with
 stickers
-The battery has its optimum performance in an ambient temperature of +5 °C to +50 °C

SAFETY

DRIVING SAFETY

Talking on the phone while driving is extremely dangerous and is illegal in some states. Remember, safety comes first. Check the laws and regulations on the use of phones in the areas where you drive. Always obey them.
Also, if using your phone while driving please:

●Give full attention to driving. Driving safely is your first responsibility.

●Use hands-free operation, if available.

●Pull off the road and park before making or answering a call, if driving conditions require.

If you must use the phone while driving, please use one-touch, speed dialing, and auto answer modes.
An airbag inflates with great force. DO NOT place objects, including both installed or portable wireless equipment, in the area over the airbag or in the air bag deployment area.
If in-vehicle wireless equipment is improperly installed and the air bag inflates, serious injury could result.

WARNING:
Failure to follow these instructions may lead to serious personal injury and possible property damage.

SAFETY

ELECTRONIC DEVICES

Most modern electronic equipment is shielded from RF energy.
However, certain electronic equipment may not be shielded against the RF signals from your wireless phone.

Pacemakers
The Health Industry Manufacturers Association recommends that a minimum separation of six (6") inches be maintained between a handheld wireless phone and a pacemaker to avoid potential interference with the pacemaker. These recommendations are consistent with the independent research by and recommendations of Wireless Technology Research.
If you have a pacemaker:
●ALWAYS keep the phone more than six inches from your pacemaker when the phone is turned on.
●Do not carry the phone in a breast pocket.
●Use the ear opposite the pacemaker to minimize the potential for interference.
●If you have any reason to suspect that interference is taking place, turn your phone OFF immediately.

Hearing Aids
Some digital wireless phones may interfere with some hearing aids. In the event of such interference, you may want to consult your service provider (or call the customer service line to discuss alternatives).

SAFETY

Other Medical Devices
If you use any other personal medical device, consult the manufacturer of your device to determine if they are adequately shielded from external RF energy Your physician may be able to assist you in obtaining this information.
Turn your phone OFF in healthcare facilities when any regulations posted in these areas instruct you to do so. Hospitals or healthcare facilities may be using equipment that could be sensitive to external RF energy.

Vehicles
RF signals may affect improperly installed or inadequately shielded electronic systems in motor vehicles. Check with the manufacturer or its representative regarding your vehicle. You should also consult the manufacturer of any equipment that has been added to your vehicle.

Posted Facilities
Turn your phone OFF where posted notices so require.

SAFETY

OTHER SAFETY GUIDELINES

Aircraft
FCC Regulations prohibit using your phone while in the air. Switch OFF your phone before boarding an aircraft.

Blasting Areas
To avoid interfering with blasting operations, turn your phone OFF when in a "blasting area" or in areas posted: "Turn off two-way radio." Obey all signs and instructions.

Potentially Explosive Atmospheres
Turn your phone OFF when in any area with a potentially explosive atmosphere and obey all signs and instructions. Sparks in such areas could cause an explosion or fire resulting in bodily injury or even death.

Areas with a potentially explosive atmosphere are often, but not always, clearly marked. They include fueling areas such as gas stations; below deck on boats; fuel or chemical transfer or storage facilities; vehicles using liquefied petroleum gas (such as propane or butane); areas where the air contains chemicals or articles, such as grain, dust, or metal powders; and any other area where you would normally be advised to turn off your vehicle's engine.

SAFETY

Your Handheld Portable Telephone is a high quality piece of equipment.Before operating the equipment,read all instructions and cautionary markings on (1)AC Adaptor (2)Battery and (3)Product Using Battery.

1.DO NOT use this equipment in an extreme environment where high temperature or high humidity exists.

2.DO NOT abuse the equipment.Avoid striking,shaking or shocking.When not using the unit,lay down the unit to avoid possible damage due to instability.

3.DO NOT expose this equipment to rain or spilled beverages.

4.DO NOT use unauthorized accessories.

5.DO NOT disassemble the phone or its accessories.If service or repair is required, return unit to an authorized Audiovox cellular service center.If unit is disassembled,the risk of electric shock or fire may result.

6.DO NOT short -circuit the battery terminals with metal items etc.

7. Use only the battery approved by manufacturer

8. DO NOT replace battery by an incorrect type.

SAFETY

WARNING

The following offenses are punishable by fine, imprisonment, or both:
●Using obscene, indecent, or profane language.

●Using the unit to give off false distress calls.

●Wiretapping or otherwise intercepting a telephone call, unless that person has first obtained the consent of the parties participating in the call.
●Making anonymous calls to annoy, harass, or molest other people.

●Charging to an account without authorization to avoid payment for service.

●Refusing to yield a party line when informed that it is needed for an emergency call (It is also unlawful to take over a party line by stating falsely that it is needed for an emergency).

SAFETY

FCC RF EXPOSURE

WARNING! Read this Information before using your phone.

In August 1996 the Federal Communications Commission (FCC) of the United States with its action in Report and Order FCC 96-326 adopted an updated safety standard for human exposure to radio frequency electromagnetic energy emitted by FCC regulated transmitters.
Those guidelines are consistent with the safety standard previously set by both U.S. and international standards bodies.
The design of this phone complies with the FCC guidelines and these international standards.

Use only the supplied or an approved antenna. Unauthorized antennas, modifications, or attachments could impair call quality, damage the phone, or result in violation of FCC regulations.
Do not use the phone with a damaged antenna. If a damaged antenna comes into contact with the skin, a minor burn may result. Please contact your local dealer for replacement antenna.

136

SAFETY

Body-worn Operation
This device was tested for typical body-worn operation with the back of the phone kept 0.5 inches (1.27cm) from the body. To comply with FCC RF exposure requirements, a minimum separation distance of 0.5 inchs (1.27cm) must be maintained between the user's body and the back of the phone, including the antenna, whether extended or retracted. All belt-clips, holsters and similar accessories used by this device must not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with FCC RF exposure limits and should be avoided.

Vehicle Mounted External Antenna(optional, if available)
A minimum separation distance of 7.9 inches (20cm) must be maintained between the user/bystander and the vehicle mounted external antenna to satisfy FCC RF exposure requirements.

Note: For more information about RF exposure, please visit the FCC website at www.fcc.gov
